1976

On March 31, 1976, a biennial investigation was conducted at the above named facility for the purpose of formally documenting their compliance with the applicable rules and regulations of the Texas Air Control Board. Mr. B. L. Tanner, facility president, and W. C. Hood of the Region VII office of the Texas Air Control Board were the participants in the conference and subsequent facility tour.

The Company, as Gulfco, Inc., has recently merged with Chromalloy and has slightly changed emphasis of operations.

The facility primarily fabricates offshore vessels such as rigs and offshore oil terminal buoys. Some minor barge cleaning (sand blasting) and repair is also conducted. The barge cleaning business has fallen off to such an extent that it is almost non-existent.

The Company's declared compliance is listed by regulation below.

Regulation I

Rules 101, 102, 105.2

Rules 101 and 102 - the Company declares compliance, no outdoor burning is conducted and no incinerator is on site; all trash is hauled off.

Rule 105.2 - the Company declares compliance even though no property line samples have ever been taken. This office has not received any complaints on this facility in over a year.

Regulation II

The Company declares compliance; they do not handle any Sulfur compounds.

Regulation IV

Rule 504 - The Company declares compliance; they no longer put volatile carbon compounds into their settling pond.

General Rule 5

The Company declares compliance; no nuisance complaints have been lodged against them in the last year.

This facility is in apparent compliance with the rules and regulations of the TACB even though no property line sampling has been accomplished. The remoteness of the facility would be a favorable factor in support of the above statement.
